

COLOR PLATE 1 (FIGURE 1-1). We experimented with different visual cues on a map to best display location data with impact and exposure values. The above shows three iterations during our preliminary design. The left map shows GPS traces colorcoded by carbon impact; in the center map, we encoded impact with uni-color area circles; on the right, we incorporated GPS data showing when the user was idle and went back to using color-coding.

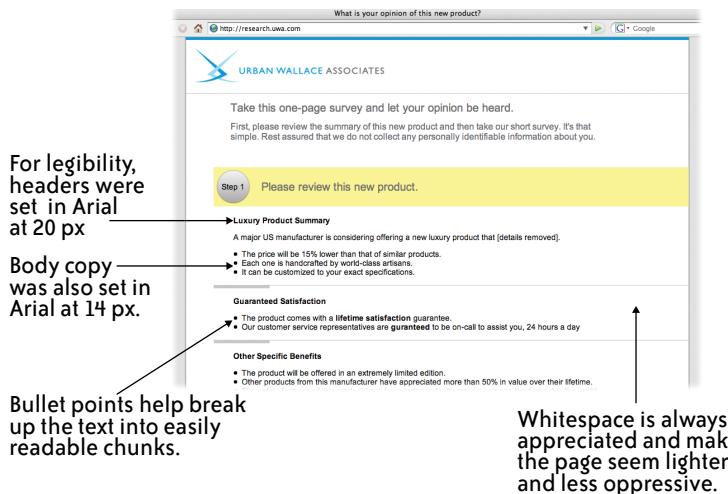

COLOR PLATE 2 (FIGURE 1-2). In the current mapping scheme, we use color filters to highlight the data. The map serves solely as context. Linked histograms show impact and exposure distributions of mapped data. When the user scrolls over a histogram bar, the corresponding GPS data is highlighted on the map.

COLOR PLATE 3 (FIGURE 1-4). PEIR's Facebook application lets users share their impact and exposure findings as well as compare their values with friends.

COLOR PLATE 4 (FIGURE 1-5). People track their weight and what they eat for different reasons. YFD places motivation front and center.

COLOR PLATE 5 (FIGURE 2-2). Designing for legibility.

What is your opinion of this new product?

URBAN WALLACE ASSOCIATES

Take this one-page survey and let your opinion be heard.

First, please review the summary of this new product and then take our short survey. It's that simple. Rest assured that we do not collect any personally identifiable information about you.

Step 1 Please review this new product.

Luxury Product Summary

A major US manufacturer is considering offering a new luxury product that [details removed].

- The price will be 15% lower than that of similar products.
- Each one is handcrafted by world-class artisans.
- It can be customized to your exact specifications.

Guaranteed Satisfaction

- The product comes with a **lifetime satisfaction** guarantee.
- Our customer service representatives are **guaranteed** to be on-call to assist you, 24 hours a day.

Other Specific Benefits

- The product will be offered in an extremely limited edition.
- Other products from this manufacturer have appreciated more than 50% in value over their lifetime.
- The safety features of this product have been independently rated as among the highest in the world.

Step 2 Please answer a few survey questions.

1. How interested would you be to purchase this kind of product?
Would you say that you:

Definitely would purchase
 Probably would purchase
 Might or might not purchase
 Probably would not purchase
 Definitely would not purchase

2. Do you currently own a product like this?
 Yes
 No

3. Do you currently own a product manufactured by [competitor's name]?
 Yes
 No

SUBMIT **CLEAR**

Done

COLOR PLATE 6 (FIGURE 2-3). The survey starts with only three questions.

What is your opinion of this new product?

1. How interested would you be to purchase this kind of product?

Would you say that you:

- Definitely would purchase
- Probably would purchase
- Might or might not purchase
- Probably would not purchase
- Definitely would not purchase

2. Which of the following are extremely important to you?
(Check up to 3 responses)

- The price of the product
- The product's lifetime guarantee
- The quality of the craftsmanship
- The fact that it can be customized to my taste
- The prestige of owning the product
- The safety features
- The on-call customer service guarantee

3. Do you currently own a product like this?

- Yes
- No

4. If you could fill out a simple form to exchange your current product for ours, would you?

- Yes
- No

5. Do you currently own a product manufactured by [competitor's name]?

- Yes
- No

6. Would you switch from [competitor's name] to our brand?

- Yes
- No

SUBMIT **CLEAR**

Done

COLOR PLATE 7 (FIGURE 2-4). The survey may expand to up to six questions depending on user input.

Step 2 Please answer a few survey questions.

1. How interested would you be to purchase this kind of product?

Would you say that you:

- Definitely would purchase
- Probably would purchase
- Might or might not purchase
- Probably would not purchase
- Definitely would not purchase

2. Which of the following are extremely important to you?

(Check up to 3 responses)

COLOR PLATE 31 (FIGURE 11-5). A map of downtown Oakland showing three reference points for triangulation purposes.

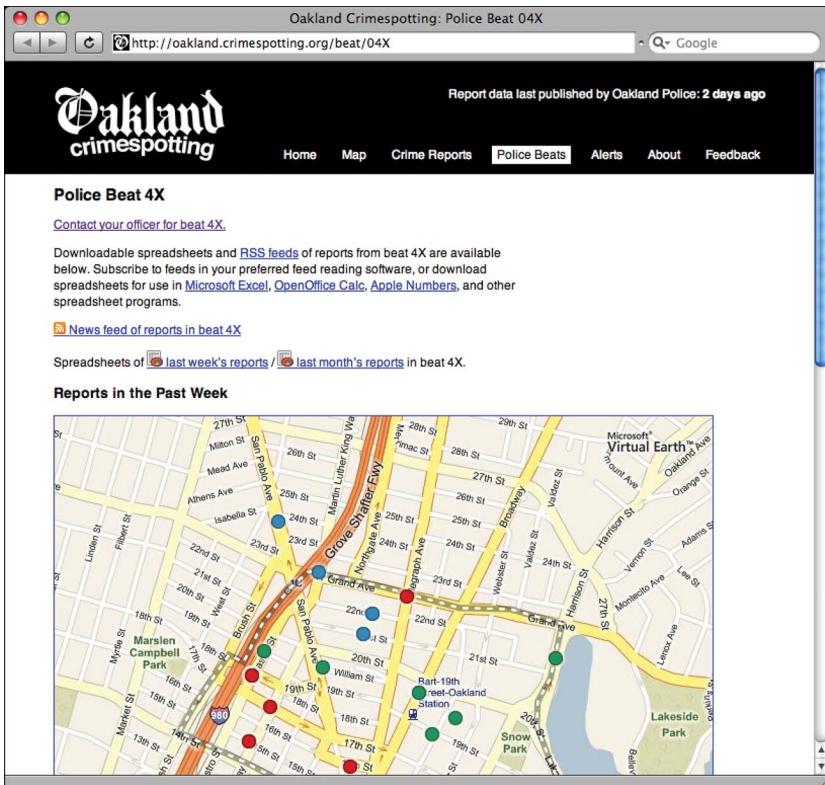

COLOR PLATE 32 (FIGURE 11-6). The *Oakland Crimespotting* home page shows a map of crime reports from the past week.

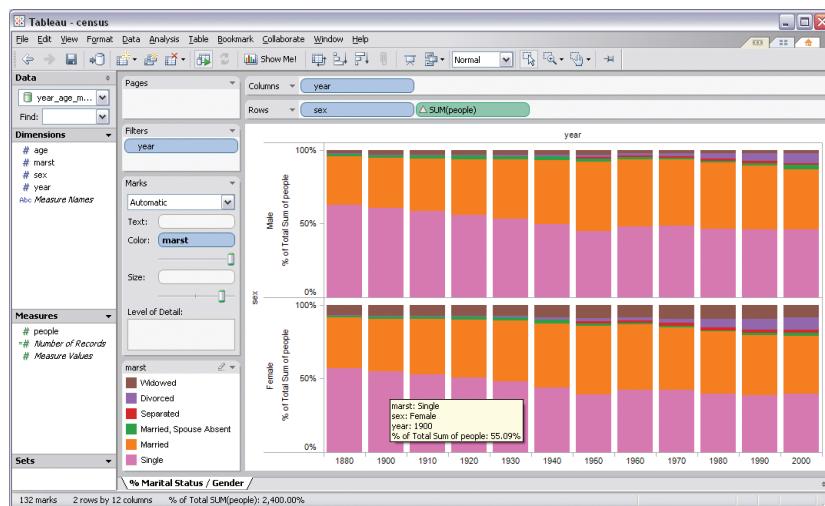

COLOR PLATE 33 (FIGURE 11-7). The date selector interface on the main *Crimespotting* map.

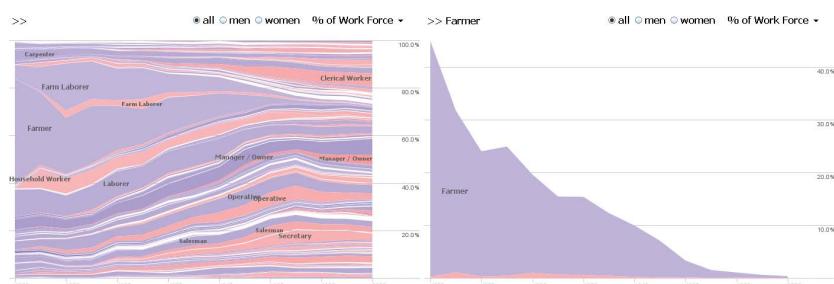

COLOR PLATE 34 (FIGURE 11-8). The type selector shows the total numbers of each report type in the selected time span.

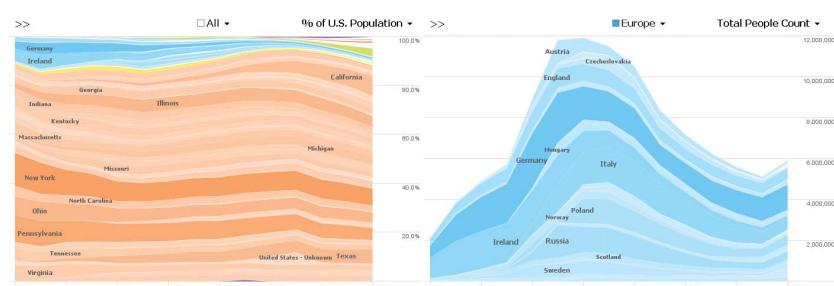

COLOR PLATE 35 (FIGURE 11-10). A beat-specific page allows citizens to provide feedback to the officers who patrol their local areas.

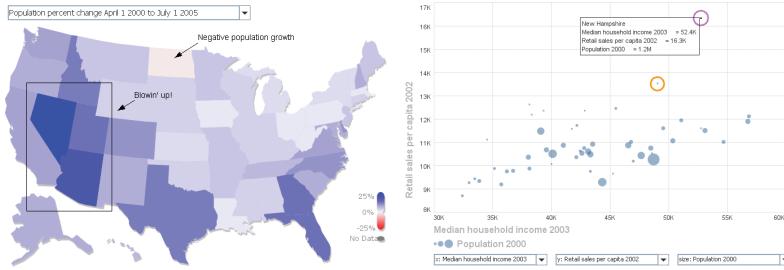

COLOR PLATE 36 (FIGURE 12-3). A prototype visualization built using Tableau showing the distribution of marital status over multiple decades.

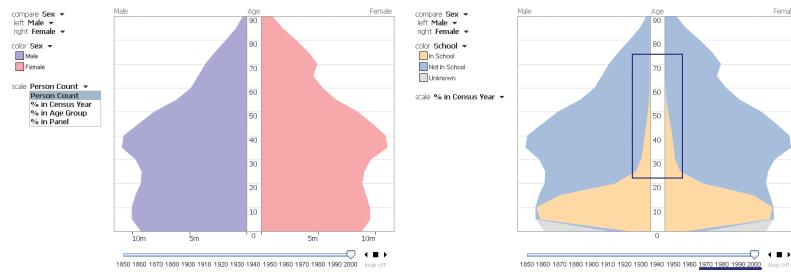

COLOR PLATE 37 (FIGURE 12-4). Job Voyager visualization: (left) an overview showing the constitution of the labor force over 150 years, and (right) a filtered view showing the percentage of farmers.

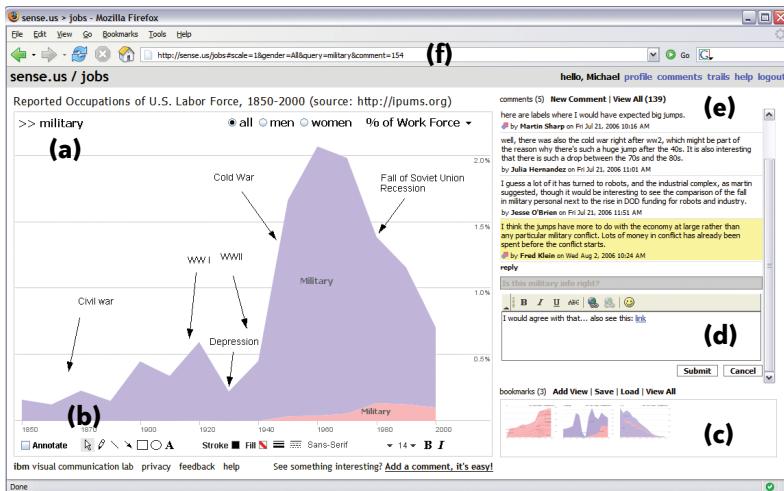

COLOR PLATE 38 (FIGURE 12-5). Birthplace Voyager visualization: (left) an overview showing the distribution of birthplaces over 150 years, and (right) a filtered view showing the total number of European immigrants.

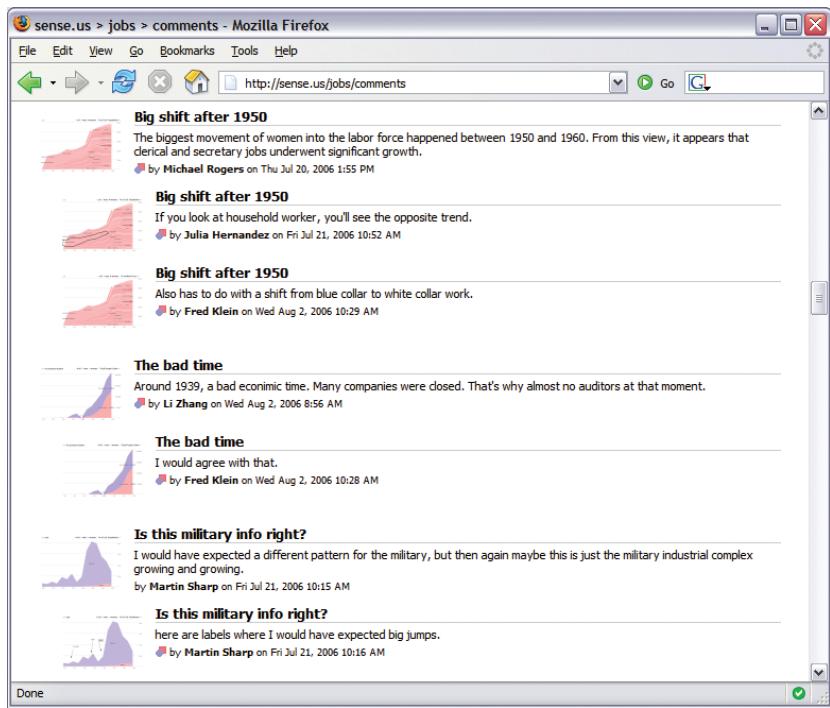

COLOR PLATE 39 (FIGURE 12-6). (Left) Interactive state map showing changes in each state's population from 2000 to 2005, and (right) scatterplot of U.S. states showing median household income (x-axis) versus retail sales (y-axis); New Hampshire and Delaware have the highest retail sales.

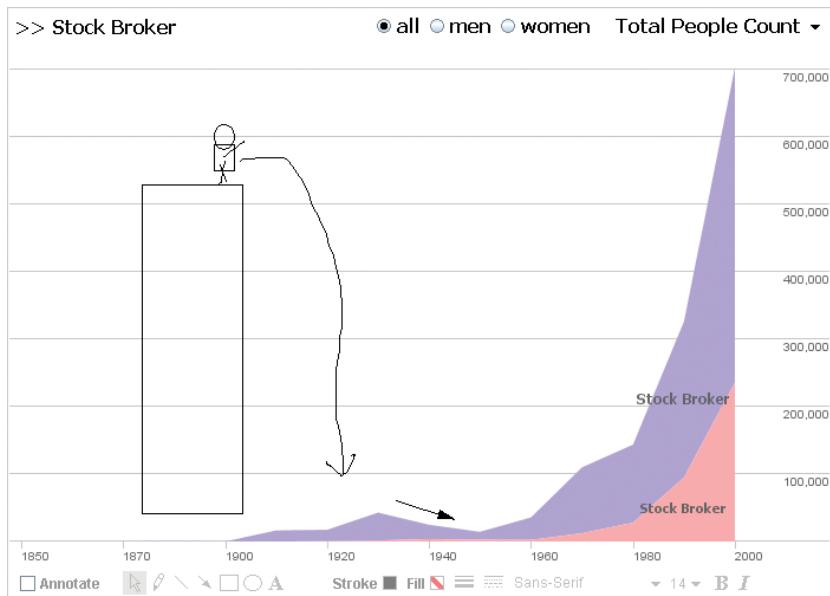

COLOR PLATE 40 (FIGURE 12-7). Population pyramid visualization: (left) a comparison of the total number of males and females in each age group in 2000, and (right) the distribution of school attendees in 2000 (an annotation highlights the prevalence of adult education).

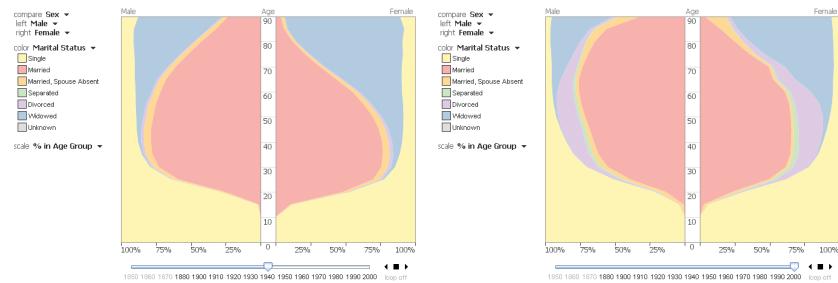

COLOR PLATE 41 (FIGURE 12-8). The sense.us collaborative visualization system: (a) An interactive visualization applet, with a graphical annotation for the currently selected comment. The visualization is a stacked time-series visualization of the U.S. labor force, broken down by gender. Here, the percentage of the workforce in military jobs is shown. (b) A set of graphical annotation tools. (c) A bookmark trail of saved views. (d) Text-entry field for adding comments. Bookmarks can be dragged onto the text field to add a link to that view in the comment. (e) Threaded comments attached to the current view. (f) URL for the current state of the application. The URL is updated automatically as the visualization state changes.

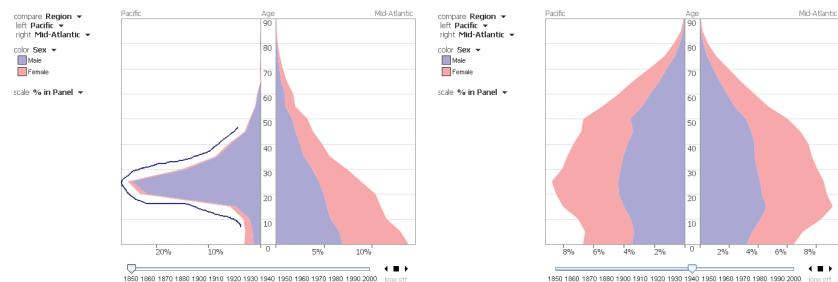

COLOR PLATE 42 (FIGURE 12-9). The sense.us comment listing page; comment listings display all commentary on visualizations and provide links to the commented visualization views.

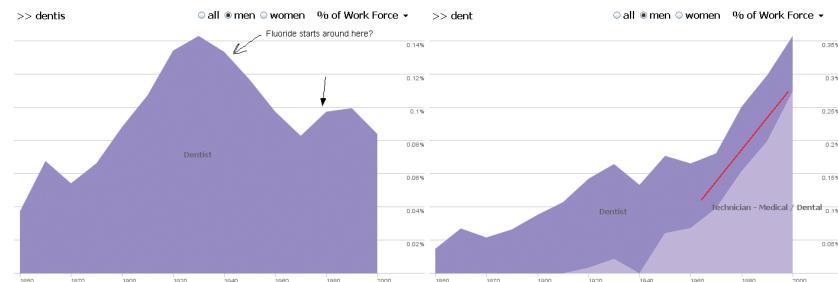

COLOR PLATE 43 (FIGURE 12-10). Annotated view of stockbrokers; the attached comment reads "Great depression 'killed' a lot of brokers."

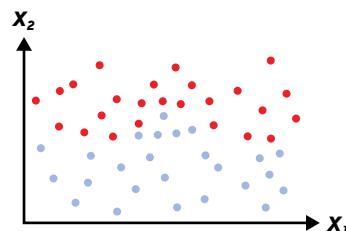

COLOR PLATE 44 (FIGURE 12-11). Population pyramid showing the distribution of marital status for each age group in (left) 1940, and (right) 2000.

COLOR PLATE 45 (FIGURE 12-12). Population pyramid comparing the populations of the west coast and mid-Atlantic regions in (left) 1850, and (right) 1940.

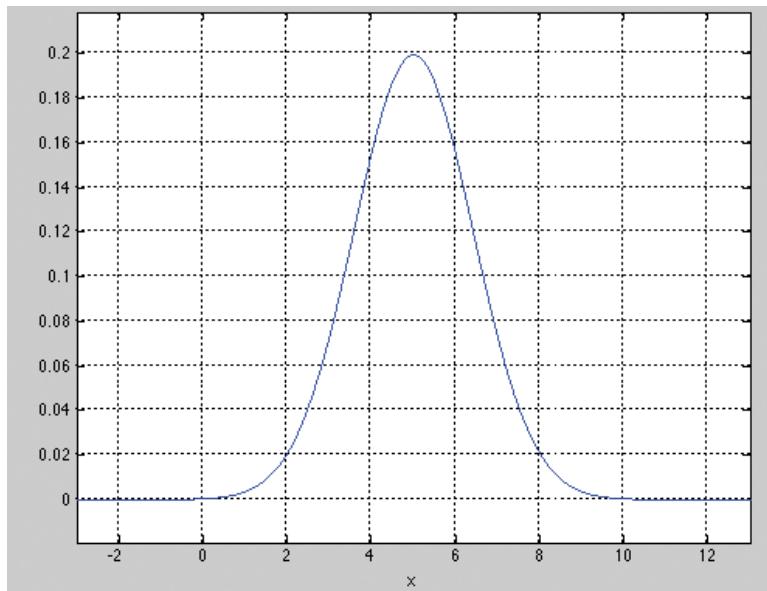

COLOR PLATE 46 (FIGURE 12-13). Annotated job voyager views highlighting (left) a decline in dentists after 1930, and (right) an overall increase in dentistry due to the rising ranks of dental technicians.

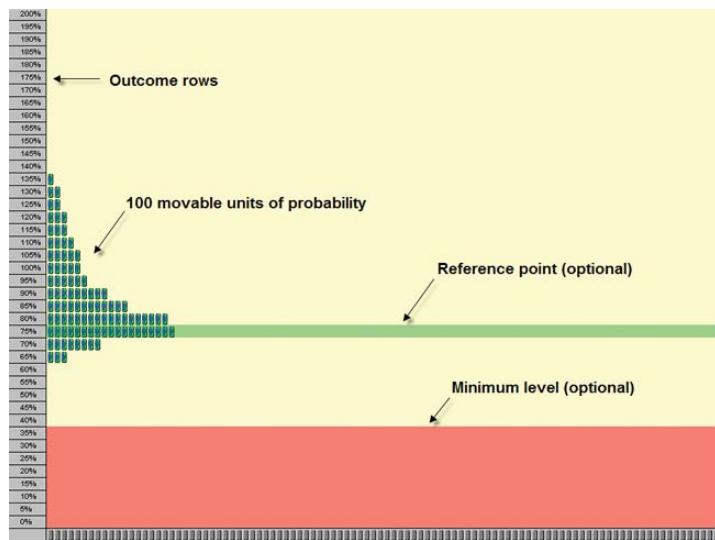

COLOR PLATE 47 (FIGURE 13-2). We can build models to discriminate between two sets of data.

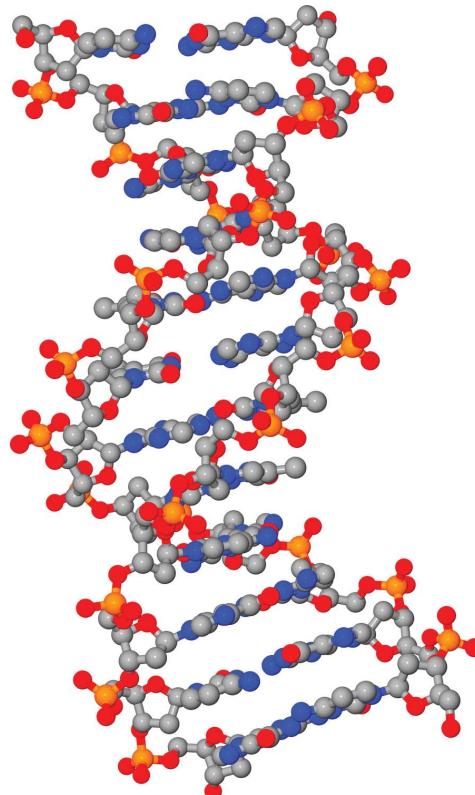

COLOR PLATE 48 (FIGURE 13-3). Performance of three securities (a, b, and c) in 2005.

COLOR PLATE 49 (FIGURE 13-4). The normal distribution.

COLOR PLATE 50 (FIGURE 13-6). A tool by Goldstein et al. helps people understand a distribution as a set of outcomes.

COLOR PLATE 51 (FIGURE 15-1). A short section of DNA, rendered in POV-Ray from PDB file 1BNA, doi: 10.2210/pdb1bna/pdb.

COLOR PLATE 52 (FIGURE 15-2). A stretch of DNA containing a gene also contains nearby regions that interact with the cellular machinery to regulate its expression; here, a gene is preceded by a promoter element and an enhancer element, which “tag” the gene so the cell knows when it should be expressed.

A

This screenshot shows a web-based experiment record for 'Exp026'. The page includes sections for 'Objective' (To ascertain the accuracy of four furfurylamine in methanone), 'Procedure' (A solution of furfurylamine in methanone was prepared by addition of furfurylamine drop-wise, using a Pasteur pipette, to a one dram vial charged with 200µl of methanone. A solution of methanol in furfurylamine was prepared by adding methanol drop-wise, using a Pasteur pipette, to a one dram vial charged with 200µl of furfurylamine. Brief lifts of swirling were used during the initial up-titration as the headspace of both the furfurylamine and methanol in furfurylamine vials was very small. The concentration of pure furfurylamine could be taken as that of the saturated solution in methanol. A solution of 5-methyl-2-furanmethanamine in methanone was prepared by addition of 5-methyl-2-furanmethanamine drop-wise, using a Pasteur pipette, to a one dram vial charged with 200µl of furfurylamine in methanol. Also, a solution of methanol in 5-methyl-2-furanmethanamine was prepared by adding methanol drop-wise, using a Pasteur pipette, to a one dram vial charged with 200µl of 5-methyl-2-furanmethanamine in methanol. Brief lifts of swirling were used during the initial up-titration as the headspace of both the furfurylamine and methanol in 5-methyl-2-furanmethanamine could be visually confirmed and the concentration of pure 5-methyl-2-furanmethanamine could be taken as that of its saturated solution in methanol.), 'Observation' (The progressive change in solution color of furfurylamine following its methylation in vial 1 was observed. The color of vial 1 changed from clear tan to an orange color. Further additions yielded a change from yellow-orange to a dark orange. Slighting of vial 1 showed no change in color. Further additions yielded a change from pale-yellow to a dark orange. Slighting of vial 2 showed no change in color. Further additions yielded a change from pale-yellow to an orange (V1 dissolved), to a dark yellow (10-20 droplets), to lightening of the color (30-40 droplets). Again, no distinctly visible leaves were observed.), and 'Results' (The results of the experiment show that the addition of 5-methyl-2-furanmethanamine to methanol yielded a change from clear to a pale yellow. The color progression for vial 4 was from a pale yellow to a clear tan color with a slight tint of yellow. No leaves in the solutions were observed from both vials 2 & 4.).

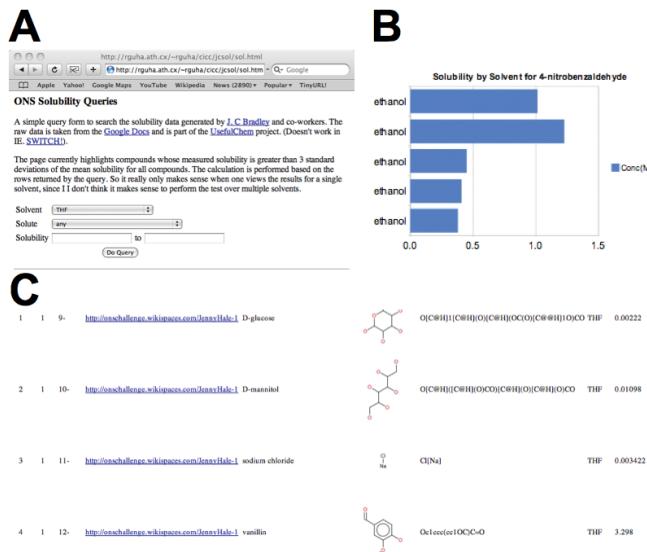

B

This image shows a Flickr page titled 'UC207-P16' featuring a photograph of several test tubes in a rack. The test tubes contain different colored liquids, likely samples from the experiment described in panel A. The Flickr interface shows other photos and user information.

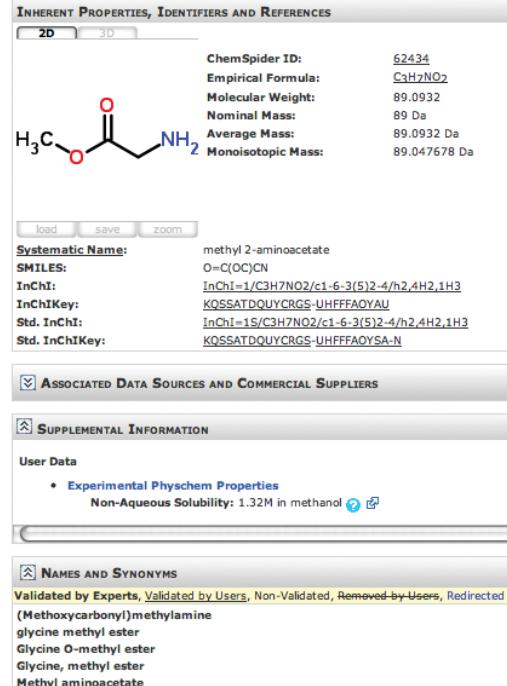

C

This image shows a Google Docs spreadsheet with data from 'Exp022'. The columns include 'EXP', 'sample or citation ref', 'solute', 'solute SMILES', 'solvent', 'solvent SMILES', and 'concentration (M) wiki page'. The data lists various solutes and their properties, such as vanillin, 2-furaldehyde, 2-methoxypropanal, 2,2-dimethylpropanal, 2,4-dimethylbenzaldehyde, 4-(methylamino)benzaldehyde, 5-bromothiophene-3-carbaldehyde, benzaldehyde, 2-butanone, cyclohexanecarbaldehyde, hexanaldehyde, m-anisaldehyde, p-anisaldehyde, p-isobutylaldehyde, p-isobutylbenzaldehyde, salicylaldehyde, 2-ethylbutyraldehyde, 2-ethylhexanoic acid, 2-methyl butyric acid, 2-methylpentan-3-one, 3-phenylbutanoic acid, 3-phenylcapropanoic acid, acetic acid, butyric acid, cyclohexanecarboxylic acid, cyclohexanoperoxylic acid, fumaric acid, hexanoic acid, isovaleric acid, linoleic acid, and methacrylic acid. Concentrations range from 4.15 to 17.47 M.

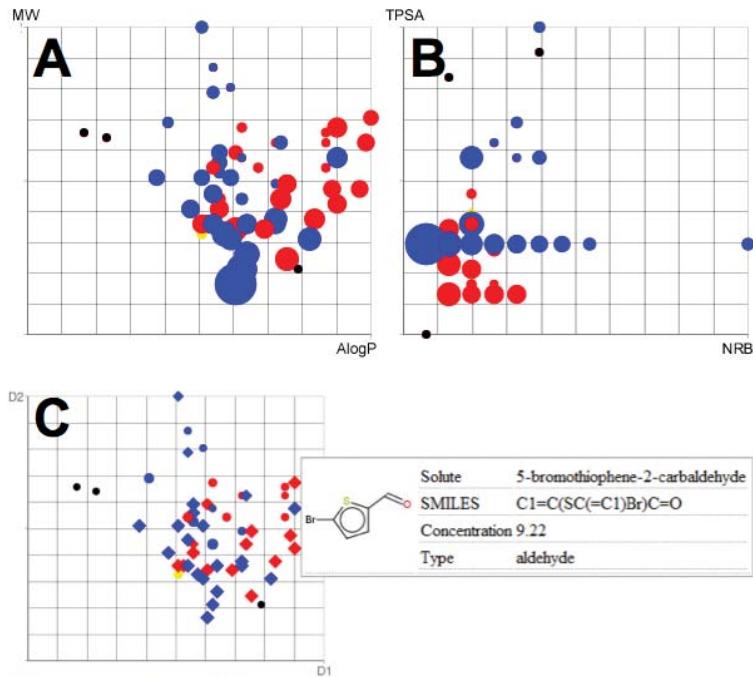

COLOR PLATE 53 (FIGURE 16-1). Using free generic services to host the record of experimental work and processed data. (A) Part of the page of a single experimental measurement. (B) Images taken of the experiment hosted on Flickr. (C) A portion of the primary data store on a GoogleDocs spreadsheet.

COLOR PLATE 54 (FIGURE 16-2). Visualization tools for examining the solubility data.(A) A simple form-based input uses JavaScript and the GoogleDocs API to generate (B) a graphical representation of the solubility values selected and (C) a tabular output of the data with rendered 2-D chemical structures. The service is available at <http://toposome.chemistry.drexel.edu/~rguha/jcsol/sol.html>. Note that these and other services described are dynamic and may not give the same results as those shown here for the same query.

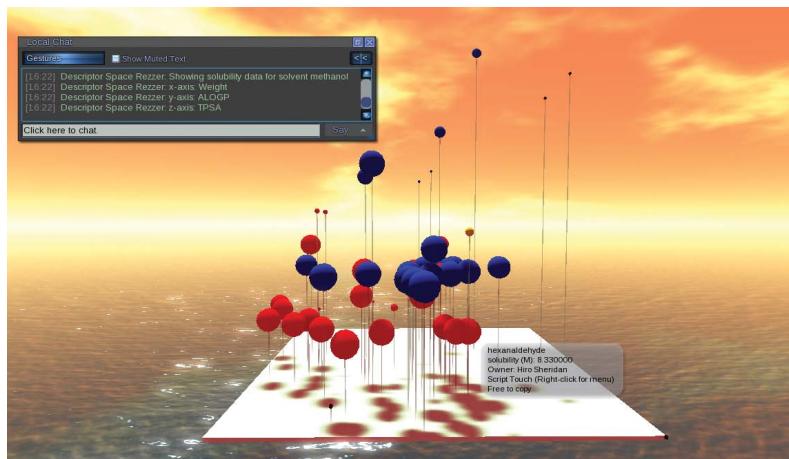

COLOR PLATE 55 (FIGURE 16-3). This example ChemSpider entry shows the solubility value and link to the original data.

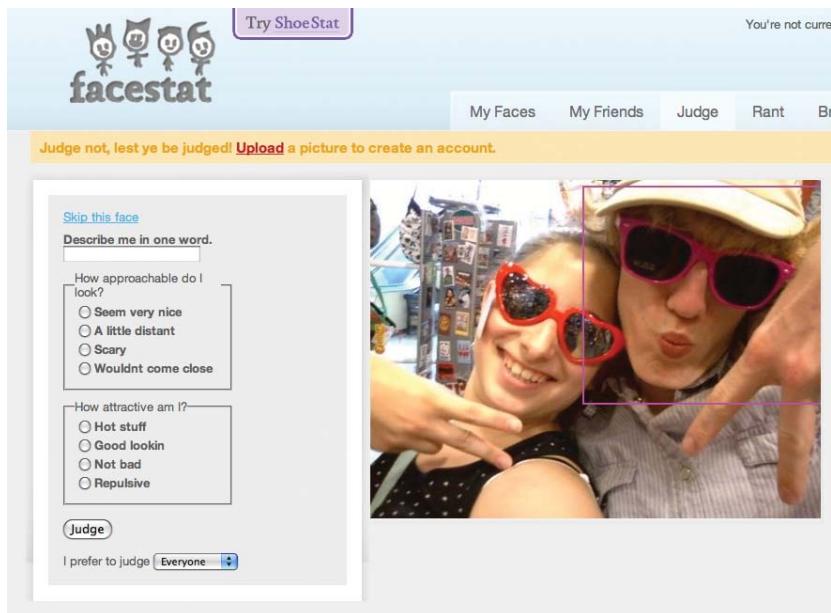

KEY: x-axis: ALOGP - y-axis: Weight
Pointsize is proportional to solubility value - Hover mouse over point to view data [Firefox].

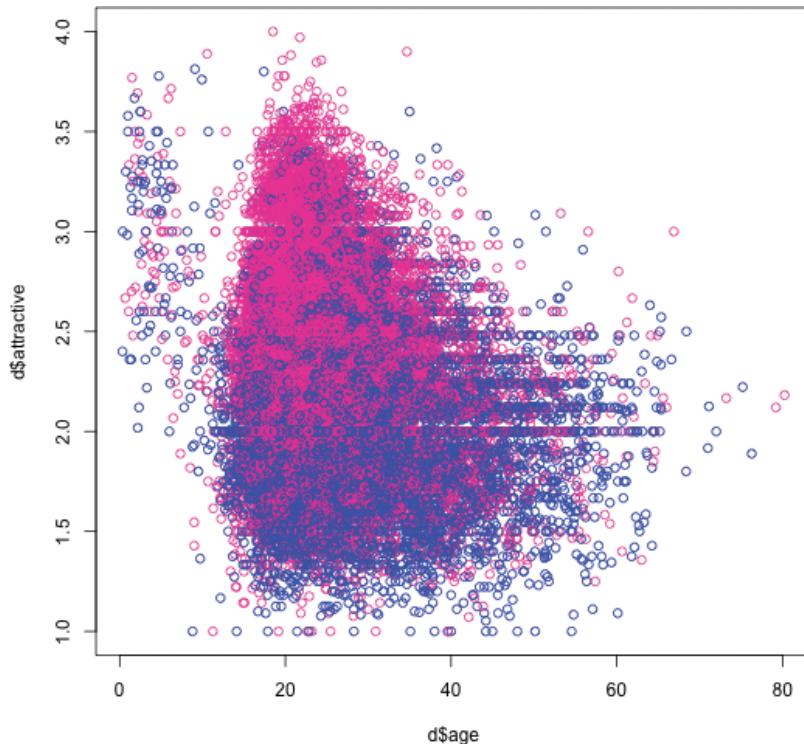

COLOR PLATE 56 (FIGURE 16-5). Graphical representation of solubility data in chemical space. Panels A and B show two visualizations of the same data plotted onto axes representing different chemical characteristics. The color of the spots represents the chemical type (red for aldehyde, blue for carboxylic acid, yellow for amine, and black for other) and the size the solubility. Panel C illustrates the clickable interface showing the chemical structure and value of the solubility for one data point.

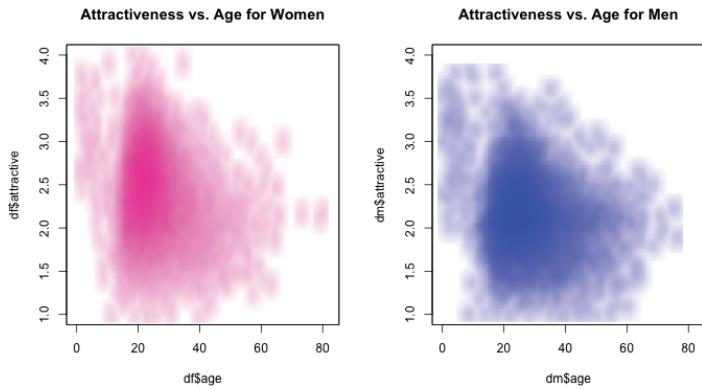

COLOR PLATE 57 (FIGURE 16-6). Representing multidimensional data using Second Life. Three chemical descriptors are represented on the three spatial axes. The color of the balls indicates the type of chemical entity (as defined in the previous figure), and the size shows the solubility in the current solvent. The visualization is available at <http://slurl.com/secondlife/Drexel/165/178/24> on Drexel Island, Second Life.

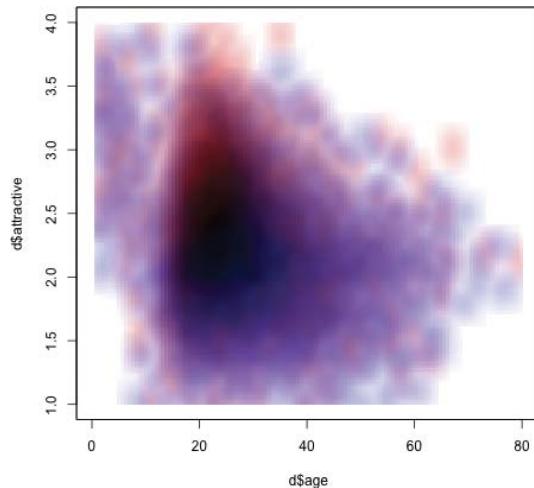

COLOR PLATE 58 (FIGURE 17-1). The FaceStat judging interface.

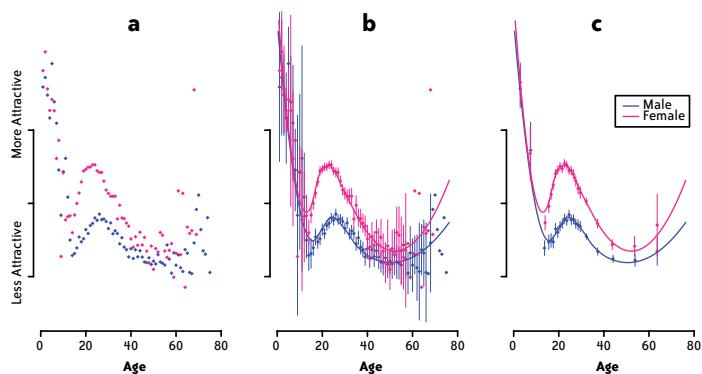

COLOR PLATE 59 (FIGURE 17-5). Scatterplot of attractiveness versus age, colored by gender.

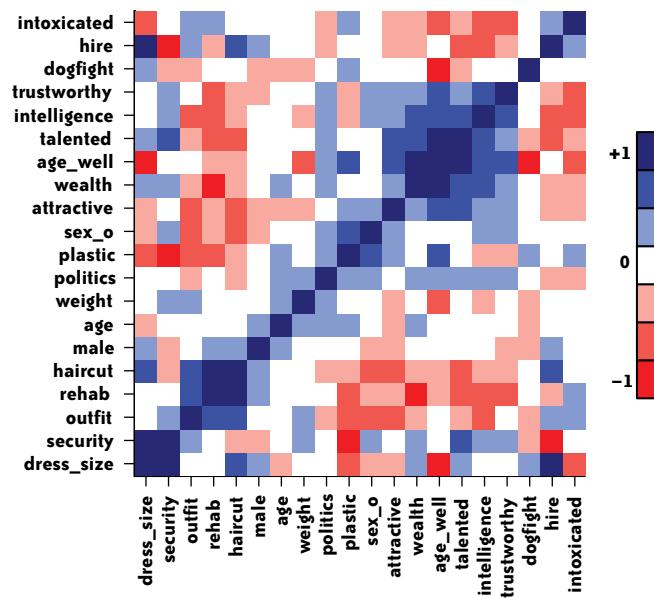

COLOR PLATE 60 (FIGURE 17-6). Smoothed scatterplots for attractiveness versus age, one plot per gender.

COLOR PLATE 61 (FIGURE 17-7). Smoothed scatterplots for attractiveness versus age, colored by gender and overlaid on one plot.

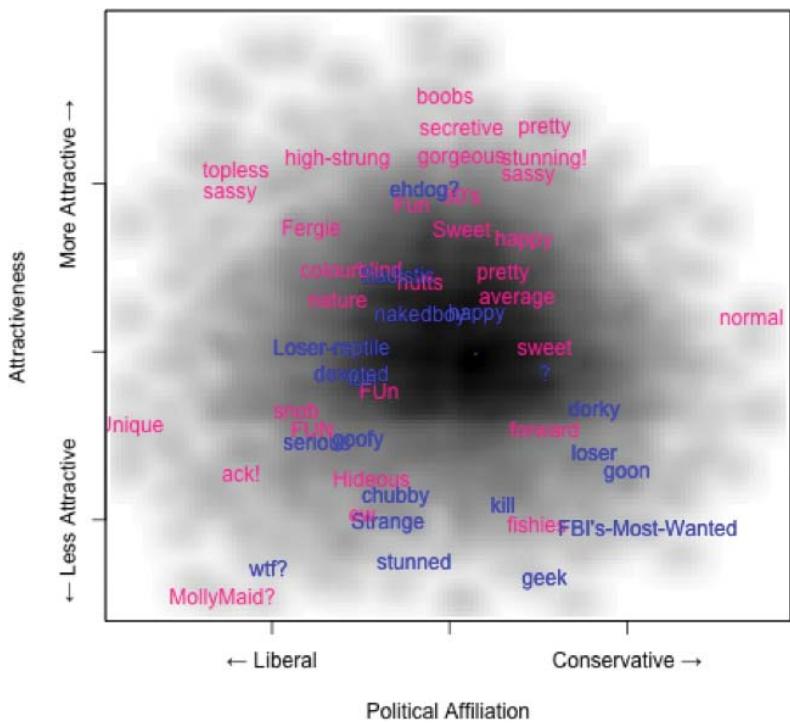

COLOR PLATE 62 (FIGURE 17-8). Three iterations of plotting attractiveness versus age versus gender: (a) ages averaged within buckets per age year, (b) 95% confidence interval for each bucket, plus loess curves, and (c) larger buckets where the data is sparser.

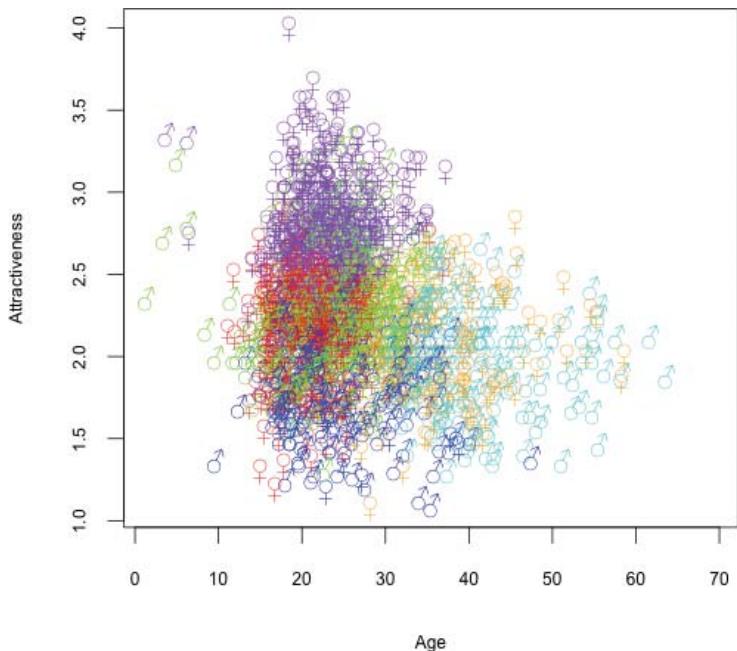

Text of questions

- **dress_size:** What is my dress size?
- **security:** If you were an airport security guard, would you search me?
- **outfit:** Do you like my outfit?
- **rehab:** Will I end up in rehab?
- **haircut:** Do you like my hairstyle?
- **age:** How old am I?
- **weight:** How much do I weigh?
- **political_affiliation:** What is my political affiliation?
(Higher is more conservative)
- **plastic_surgery:** Have I had plastic surgery?
- **sexual_orientation:** What is my sexual orientation?
(Higher is more gay)
- **attractive:** How attractive am I?
- **wealth:** How wealthy am I?
- **age_well:** Will/Have I age(d) well?
- **talented:** Am I talented?
- **intelligence:** How smart am I?
- **trustworthy:** How trustworthy am I?
- **dogfight:** Do you think I would win a fight with a medium sized dog?
- **hire:** Would you hire me?
- **intoxicated:** How intoxicated am I?

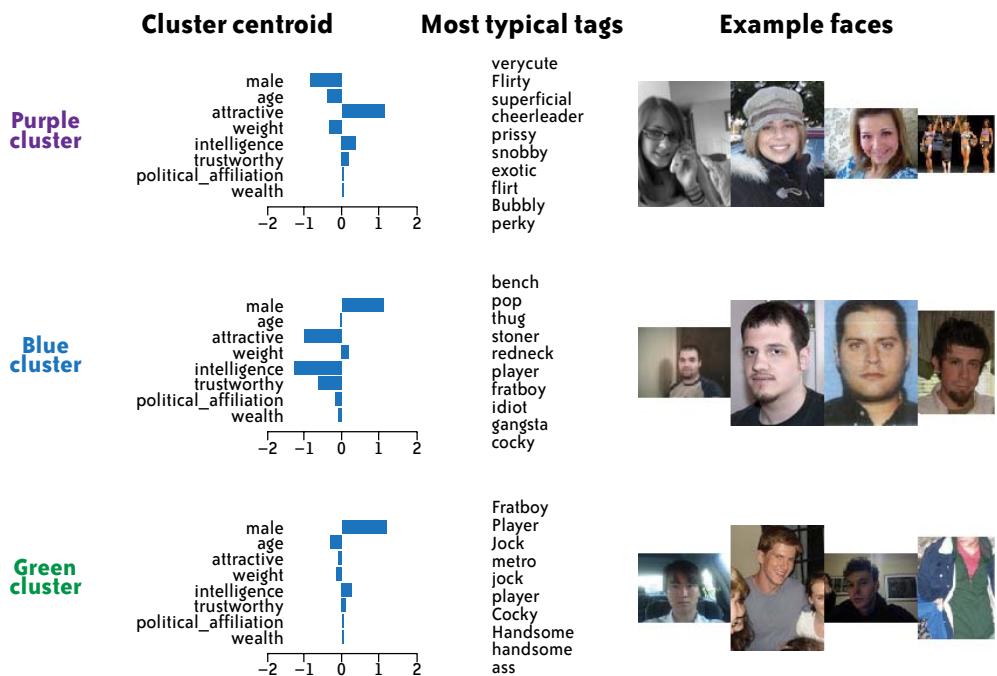

COLOR PLATE 63 (FIGURE 17-9). Pearson correlation matrix; attribute pairs with blue squares are positively correlated, while pairs with red squares are antico-relation.

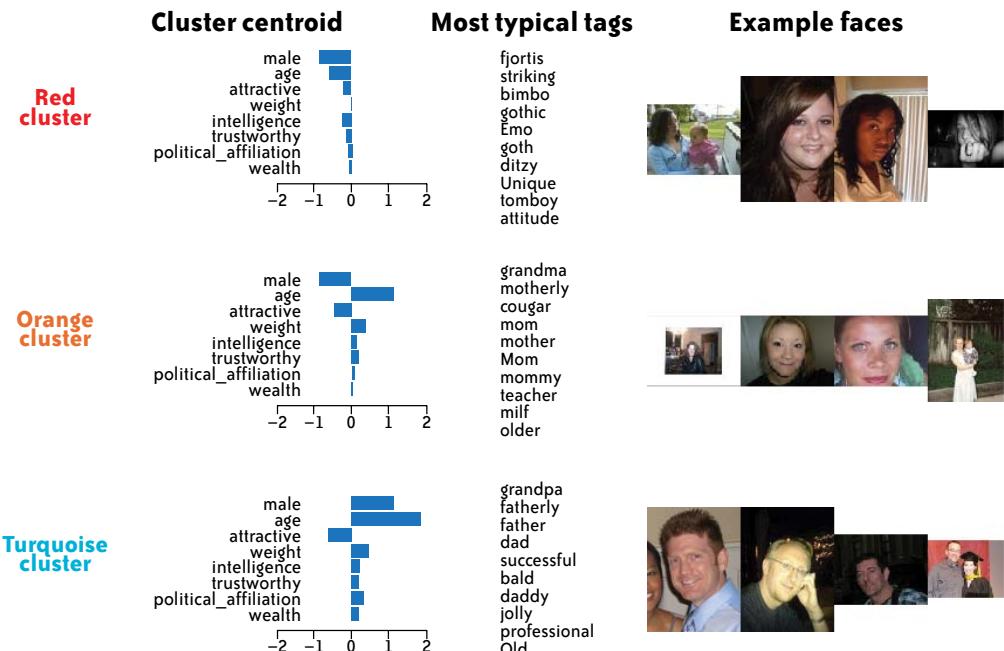

COLOR PLATE 64 (FIGURE 17-12). Tag sample plotted on a smoothed attractiveness versus age scatterplot.

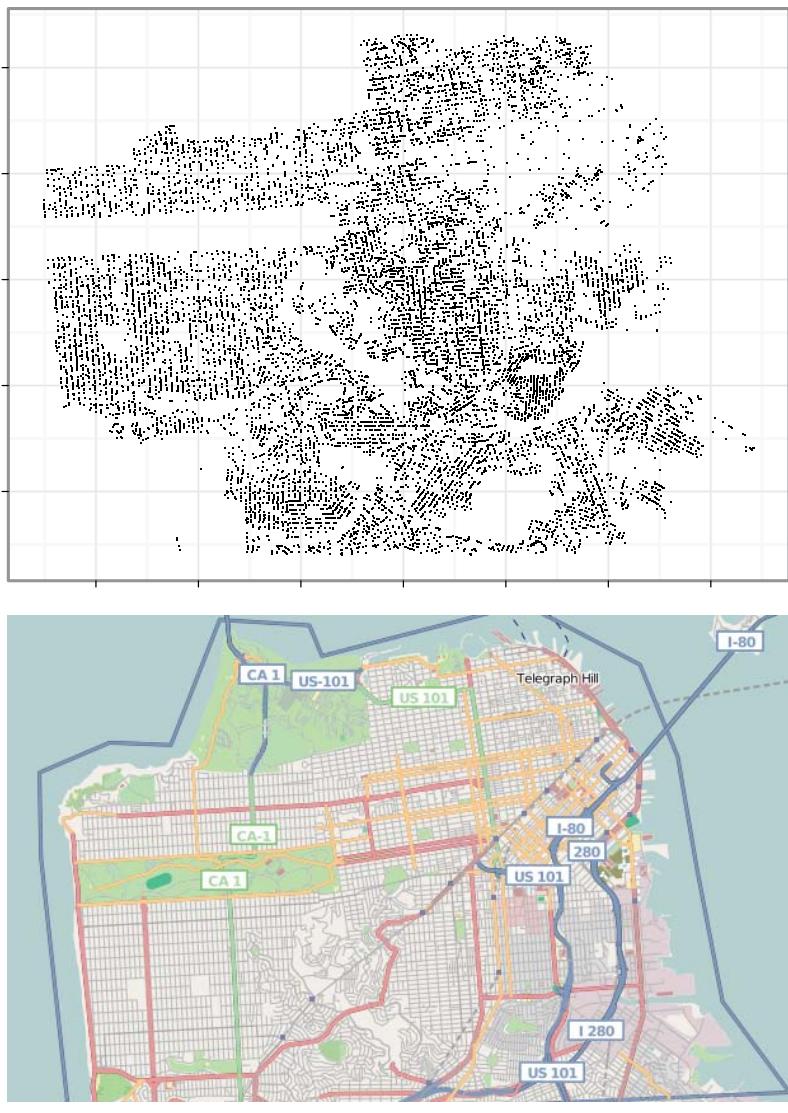

COLOR PLATE 65 (FIGURE 17-13). Attractiveness versus age, colored by cluster, showing a subsample of 2,000 points.

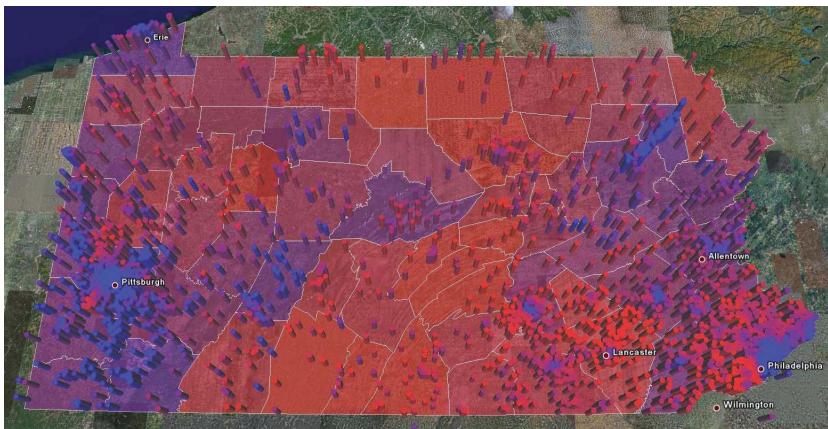

COLOR PLATE 66 (FIGURE 17-15). Cluster centroids, tags, and exemplars.

COLOR PLATE 67 (FIGURE 17-16). Cluster centroids, tags, and exemplars, continued.

COLOR PLATE 68 (FIGURE 18-13). (Top) A small point is drawn for every residential sale in the data. It gives us a pretty good feel for the layout of San Francisco. (Bottom) For comparison, a street map of San Francisco from <http://openstreetmap.com>.

COLOR PLATE 69 (FIGURE 19-5). Geographic partisanship in Pennsylvania. The base layer shows Pennsylvania counties shaded by their 2004 presidential election returns, with blue indicating higher support for the Democratic candidate John Kerry, red indicating higher support for the Republican candidate George W. Bush, and shades of purple in between. The scattered cylinders represent localized partisanship for 4,000 random registered voters in the state, defined as the percentage of people living within a 1-mile radius who are registered Democrats. Each cylinder is located on the voter's household and has a radius of 1 mile, thus replicating the region for the partisanship measure. Again, blue cylinders indicate highly Democratic regions—this time with regard to individual-level registration—red cylinders indicate highly Republican regions, and shades of purple indicate regions in the middle. The beauty of this graph is that it reveals complexity in the idea of red and blue regions of the country, of individual states, and even of individual counties.

COLOR PLATE 70 (FIGURE 20-1). Pie charts resulting from a data mashup of SEC industry data and Center for Responsible Politics political contribution data.
